

ThreatSwitch delivers hard ROI for its customers by reducing the time and effort spent on common security and compliance tasks.

“Having used other solutions we find ThreatSwitch to be the best one in terms of ease of use, availability, pricing and frequent updates to address requested enhancements.”

Chuck Helton, Director of Security, Belcan

## THREATSWITCH DELIVERS ROI

Its tough to calculate return on investment (ROI) for anything related to security, so we enlisted the help of a team of Lean Six Sigma black belts to help. They examined each step in how companies typically assign and manage security training, report and track reportable information, and deal with personnel security actions. Then, they compared it to the same steps with ThreatSwitch.

## THE RESULT: BIG SAVINGS

What did the process experts find? ThreatSwitch significantly cuts the time required to complete those tasks. And not just for the FSO – most of the savings came from reduction in employee and executive time. If your company thinks that the time of its people is valuable, then the impact of using ThreatSwitch delivers.

## WHAT'S THE SECRET?

How does ThreatSwitch do it? It's simple: by automating or reducing the time to complete very frequent tasks – like sending emails, tracking training, sending reminders, or filling out forms – we shave time (which is money) off of each and every security action for everyone. If you have hundreds or thousands of employees, the savings add up in a hurry.
