

Manage your insider threat program. Keep track of training, reporting, and your cleared people. Be NISPOM compliant. Breathe. ThreatSwitch makes it FSO easy.

### THE RESULT:

- Less time spent on admin.
- Answers from experts when you need them.
- Security collaboration with your peers and your people.

**“Having used other solutions we find ThreatSwitch to be the best one in terms of ease of use, availability, pricing and frequent updates to address requested enhancements.”**

Charles Helton  
Director of Security

## **SAVE TIME FOR THE IMPORTANT STUFF**

How does ThreatSwitch do it? It's simple: by automating or reducing the time to complete very frequent tasks -- like entering data, sending emails, tracking training, sending reminders, or filling out forms -- we shave time (which is money) off of each and every security action for everyone. This gives you more time to focus on important stuff like threat analysis, or your other duties.

## **HELP FROM SECURITY EXPERTS WHEN YOU NEED IT**

Even experts get stuck sometimes. When we do, we turn to things like LinkedIn groups, our customers, or our peers. The problem is that sometimes the info we get is incorrect, or out of date. Whether you need help determining how to handle a security situation, or just how to complete a task in JPAS, we are just a click away with certified security managers.

## **REAL SECURITY COLLABORATION—FOR EVERYONE**

Because of the new insider threat rules, DSS in Transition (DiT), and risk-based security trends, it's more important than ever that security programs are focused on collaboration, not just "checking the box." That means you need a way to communicate with your security team AND your employees about training, threats, risks, and their status. ThreatSwitch is designed with these changes -- and collaboration -- in mind.
